Experiment - 9

Hospital Information System Using Zoho One (SaaS)

Aim

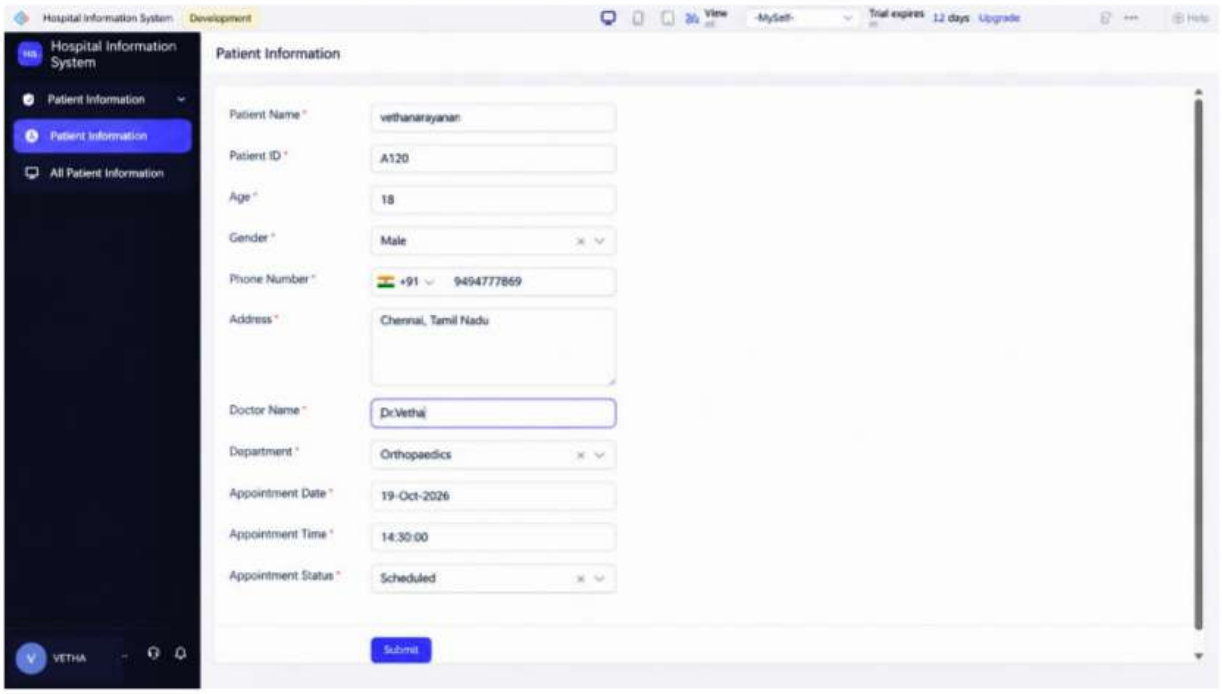

To create a cloud-based Hospital Information System using Zoho One / Zoho Creator to record and manage patient, doctor, and appointment details and demonstrate Software as a Service (SaaS).

Procedure

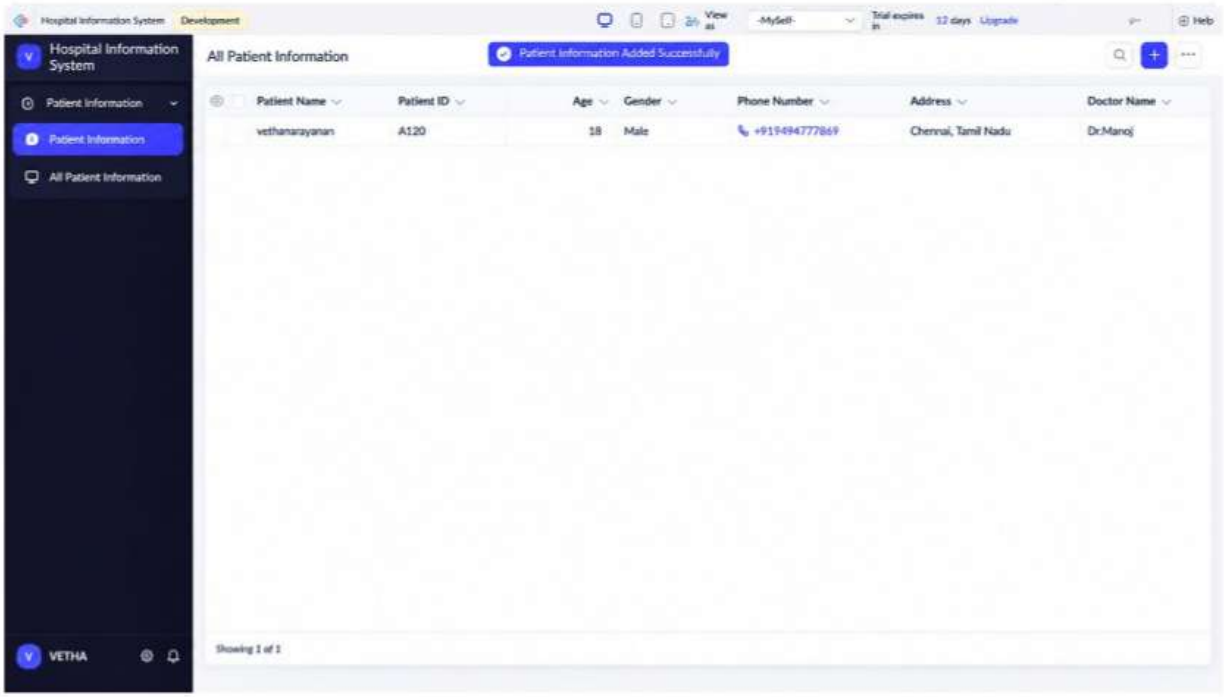

1. Log in to the Zoho One account.
2. Open Zoho Creator from the applications menu.
3. Create a new application named Hospital Information System.
4. Create a form named Patient Information.
5. Add the following fields to the form:
    1. Patient Name – Single Line
    2. Patient ID – Single Line
    3. Age – Number
    4. Gender – Dropdown
    5. Phone Number – Phone
    6. Address – Multi Line
    7. Doctor Name – Single Line
    8. Department – Dropdown
    9. Appointment Date – Date
    10. Appointment Time – Time
    11. Appointment Status – Dropdown
6. Configure the Gender dropdown with options Male, Female, and Other.
7. Configure the Department dropdown with options General Medicine, Cardiology, Orthopaedics, Neurology, and Paediatrics.
8. Configure the Appointment Status dropdown with options Scheduled, Completed, and Cancelled.
9. Arrange the fields properly to create a user-friendly form.
10. Save and publish the application.
11. Enter sample patient and appointment details.
12. Submit the form and verify that the information is stored in the cloud.
13. Open the report section to view the submitted patient records.
14. Test the form by entering details for different patients and appointments.
15. Verify that the application can be accessed through Zoho Creator as a cloud-based SaaS application.

Implementation

Input:

Output:

Result

Thus, the Hospital Information System was successfully created using Zoho One / Zoho Creator. The application records and manages patient information and appointment details in the cloud, demonstrating the Software as a Service (SaaS) model.
