CSA15- CLOUD COMPUTING AND BIG DATA ANALYTICS
EXPERIMENT_4

AIM

To develop a simple Cloud-Based Library Book Reservation System for the SIMATS library using a Cloud Service Provider to demonstrate SaaS, with options to record and reserve books based on title, author, publications, year, edition, number of copies, rack number and status (taken or returned).

PROCEDURE

1. Create a web-based Library Book Reservation System for the SIMATS library using a cloud Software as a Service (SaaS) platform.
2. Add fields like Title of the Book, Author, Publications, Year, Edition, No. of Copies, Rack No. and Status (Taken / Returned).
3. Enter the book details: title, author, publications, year and edition.
4. Enter the number of copies available and the rack number where the book is placed.
5. Select the status of the book as Taken or Returned.
6. Enter the member details, reservation date and return due date, then click Reserve Book.
7. Submit the form to confirm the reservation.
8. Display the reservation details in the Reservations report.
9. Deploy (publish) the application using the cloud service.
10. Access the application through a web browser to demonstrate SaaS.

IMPLEMENTATION

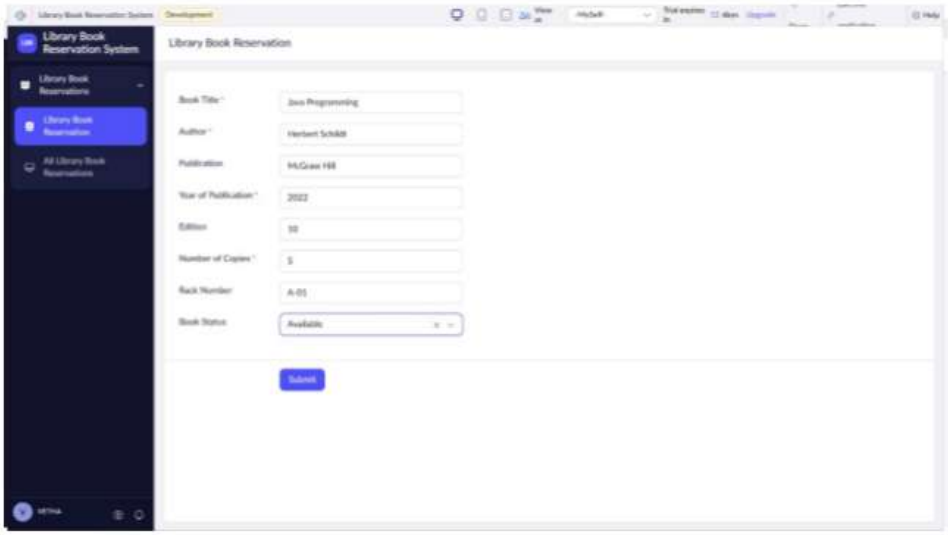

Fig. 1: Library book reservation form

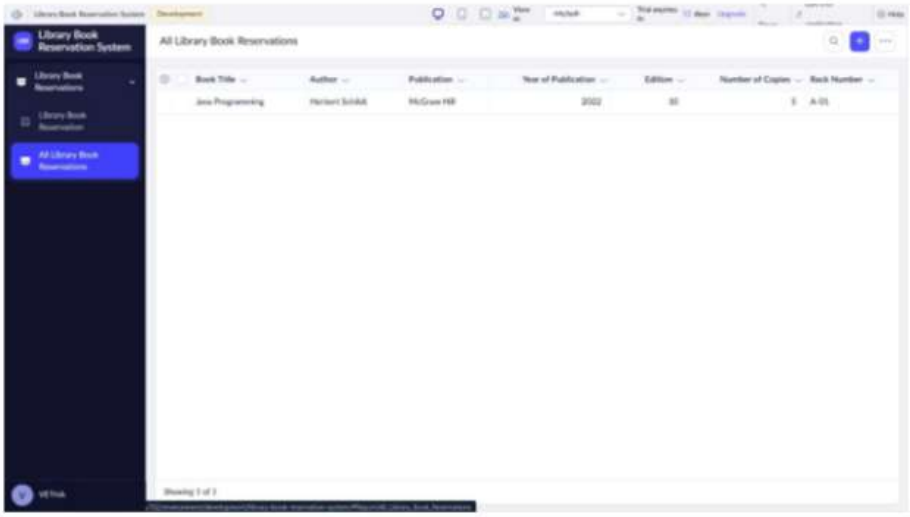

Fig. 2: Reservations report showing book details and status (Taken / Returned)

RESULT

The Cloud-Based Library Book Reservation System for the SIMATS library was successfully developed and deployed using a cloud platform, demonstrating the SaaS model.
