CSA15- CLOUD COMPUTING AND BIG DATA ANALYTICS
EXPERIMENT_5

AIM

To develop a simple Cloud-Based Mark Sheet Processing System using a Cloud Service Provider to demonstrate SaaS, with options to enter student details, subjects and marks, and to calculate the total, average, percentage, rank and overall performance of each student.

PROCEDURE

1. Create a web-based Mark Sheet Processing System using a cloud Software as a Service (SaaS) platform.
2. Add fields like Name of the Student, Reg. No., Subjects, Marks, Total, Average, Percentage, Rank and Overall Performance.
3. Enter the name, register number, department and semester of the student.
4. Enter the subjects and the marks obtained in each subject.
5. Calculate the total marks, average and percentage automatically from the marks entered.
6. Determine the rank of the student and the overall performance (Distinction, First Class, Second Class or Fail).
7. Submit the form to save the mark sheet.
8. Display the processed mark sheets in the Mark Sheets report.
9. Deploy (publish) the application using the cloud service.
10. Access the application through a web browser to demonstrate SaaS.

IMPLEMENTATION

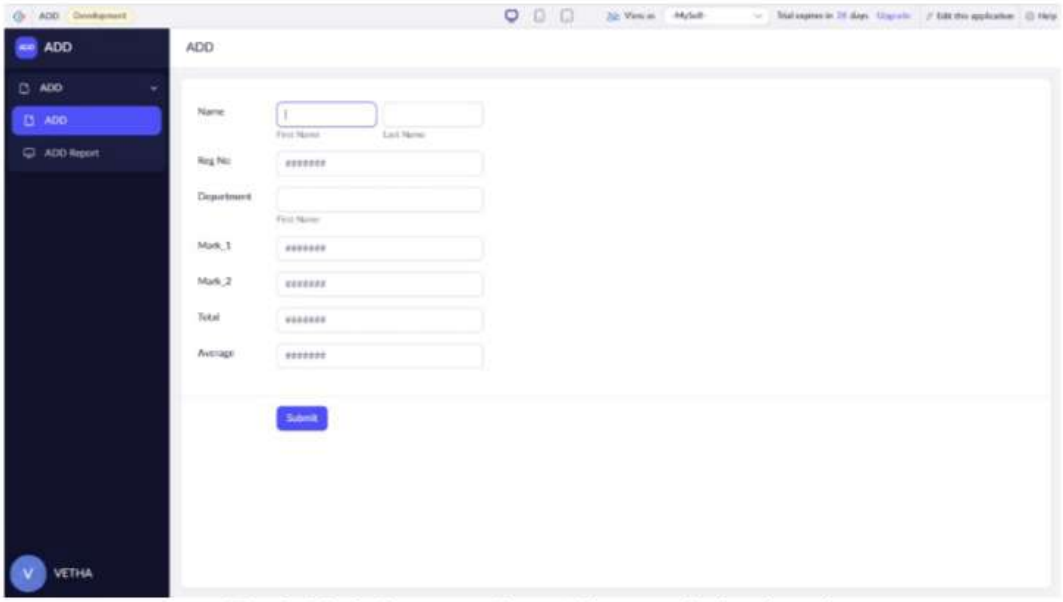

Fig. 1: Mark sheet entry form with auto-calculated result

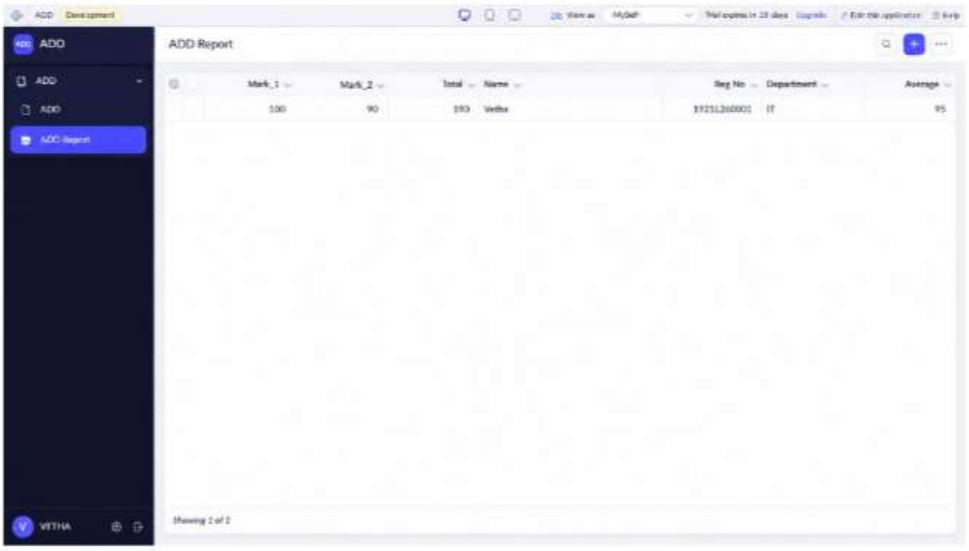

Fig. 2: Mark Sheets report showing average, percentage, rank and overall performance

RESULT

The Cloud-Based Mark Sheet Processing System was successfully developed and deployed using a cloud platform, demonstrating the SaaS model.
